

[Full Version Latest Lead2pass 70-762 Exam Free 70-762 Dumps Download (11-20)]

2017 March Microsoft Official New Released 70-762 Dumps in Lead2pass.com! 100% Free Download! 100% Pass Guaranteed!

How to pass 70-762 exam easily? Are you struggling for the 70-762 exam? Good news, Lead2pass Microsoft technical experts have collected all the questions and answers which are updated to cover the knowledge points and enhance candidates' abilities. We offer the latest 70-762 PDF and VCE dumps with new version VCE player for free download, and the new 70-762 dump ensures your 70-762 exam 100% pass. Following questions and answers are all new published by Microsoft Official Exam Center:

<http://www.lead2pass.com/70-762.html> QUESTION 11 You are a database developer for a company. The company has a server that has multiple physical disks. The disks are not part of a RAID array. The server hosts three Microsoft SQL Server instances. There are many SQL jobs that run during off-peak hours. You must monitor the SQL Server instances in real time and optimize the server to maximize throughput, response time, and overall SQL performance. What should you do? A. A. Create `sys.dm_os_waiting_tasks` query. B. Create a `sys.dm_exec_sessions` query. C. Create a Performance Monitor Data Collector Set. D. Create a `sys.dm_os_memory_objects` query. E. Create a `sp_configure 'max server memory'` query. F. Create a SQL Profiler trace. G. Create a `sys.dm_os_wait_stats` query. H. Create an Extended Event. Answer: B QUESTION 12 You are a database developer for a company. The company has a server that has multiple physical disks. The disks are not part of a RAID array. The server hosts three Microsoft SQL Server instances. There are many SQL jobs that run during off-peak hours. You must monitor the SQL Server instances in real time and optimize the server to maximize throughput, response time, and overall SQL performance. You need to ensure that the performance of each instance is consistent for the same queried and query plans. What should you do? A. Create a `sys.dm_os_waiting_tasks` query. B. Create a `sys.dm_exec_sessions` query. C. Create a Performance Monitor Data Collector Set. D. Create a `sys.dm_os_memory_objects` query. E. Create a `sp_configure 'max server memory'` query. F. Create a SQL Profiler trace. G. Create a `sys.dm_os_wait_stats` query. H. Create an Extended Event. Answer: H QUESTION 13 You are a database developer for a company. The company has a server that has multiple physical disks. The disks are not part of a RAID array. The server hosts three Microsoft SQL Server instances. There are many SQL jobs that run during off-peak hours. You must monitor the SQL Server instances in real time and optimize the server to maximize throughput, response time, and overall SQL performance. You need to collect query performance data while minimizing the performance impact on the SQL Server. What should you do? A. Create a `sys.dm_os_waiting_tasks` query. B. Create a `sys.dm_exec_sessions` query. C. Create a Performance Monitor Data Collector Set. D. Create a `sys.dm_os_memory_objects` query. E. Create a `sp_configure 'max server memory'` query. F. Create a SQL Profiler trace. G. Create a `sys.dm_os_wait_stats` query. H. Create an Extended Event. Answer: C QUESTION 14 You are a database developer for a company. The company has a server that has multiple physical disks. The disks are not part of a RAID array. The server hosts three Microsoft SQL Server instances. There are many SQL jobs that run during off-peak hours. You must monitor the SQL Server instances in real time and optimize the server to maximize throughput, response time, and overall SQL performance. You need to create a baseline set of metrics to report how the computer running SQL Server operates under normal load. The baseline must include the resource usage associated with the server processes. What should you do? A. A. Create a `sys.dm_os_waiting_tasks` query. B. Create a `sys.dm_exec_sessions` query. C. Create a Performance Monitor Data Collector Set. D. Create a `sys.dm_os_memory_objects` query. E. Create a `sp_configure 'max server memory'` query. F. Create a SQL Profiler trace. G. Create a `sys.dm_os_wait_stats` query. H. Create an Extended Event. Answer: D QUESTION 15 Hotspot Question You have a database named Sales. You need to create a table named Customer that includes the columns described in the following table:
How should you complete the Transact SQL statement? To answer, select the appropriate TransactSQL segments in the answer area. Answer: QUESTION 16 Hotspot Question You are developing an app that allows users to query historical company financial data. You are reviewing email messages from the various stakeholders for a project. The message from the security officer is shown in the Security Officer Email exhibit below. TO: Database developer From: Security Officer Subject: SQL object requirements We need to simplify the security settings for the SQL objects. Having to assign permissions at every object in SQL is tedious and leads to a problem. Documentation is also more difficult when we have to assign permissions at multiple levels. We need to assign the required permissions at one object, even though that object may be obtaining from other objects. The message from the sales manager is shown in the Sales Manager Email exhibit below. TO: Database developer From: Sales Manager Subject: Needed SQL objects When creating objects for our use, they need to be flexible. We will be changing the base infrastructure frequently. We need components in SQL that will provide backward compatibility to our front end applications as the environments change so that do not need to modify the front end applications. We need objects that can provide a filtered set of the data. The data may be coming from multiple tables and we need an object that can provide access to all of the data through a single object

reference. This is an example of the types of data we need to be able to have queries against without having to change the front end applications. The message from the web developer is shown in the Web Developer Email exhibit below. TO: Database developer From: Web Developer Subject: SQL Object component Whatever you will be configuring to provide access to data in SQL, it needs to connect using the items referenced in this interface. We have been using this for a long time, and we cannot change this from end easily. Whatever objects are going to be used in SQL they must work using object types this interface references. You need to create one or more objects that meet the needs of the security officer, the sales manager and the web developer. For each of the following statements, select Yes if the statement is true. Otherwise, select No. Answer: QUESTION 17 You have a database that contains a table named Employees. The table stored information about the employees of your company. You need to implement the following auditing rules for the Employees table: - Record any changes that are made to the data in the Employees table. - Customize the data recorded by the audit operations. Solution: You implement a user-defined function on the Employees table. Does the solution meet the goal? A. Yes B. No Answer: A QUESTION 18 You have a database that contains a table named Employees. The table stored information about the employees of your company. You need to implement the following auditing rules for the Employees table: - Record any changes that are made to the data in the Employees table. - Customize the data recorded by the audit operations. Solution: You implement a check constraint on the Employees table. Does the solution meet the goal? A. Yes B. No Answer: B QUESTION 19 You have a database that contains a table named Employees. The table stored information about the employees of your company. You need to implement the following auditing rules for the Employees table: - Record any changes that are made to the data in the Employees table. - Customize the data recorded by the audit operations. Solution: You implement a stored procedure on the Employees table. Does the solution meet the goal? A. Yes B. No Answer: B QUESTION 20 Your company has employees in different regions around the world. You need to create a database table that stores the following employee attendance information: - Employee ID - date and time employee checked in to work - date and time employee checked out of work Date and time information must be time zone aware and must not store fractional seconds. Solution: You run the following Transact-SQL statement: Does the solution meet the goal? A. Yes B. No Answer: B Lead2pass Microsoft 70-762 exam dumps are audited by our certified subject matter experts and published authors for development. Lead2pass Microsoft 70-762 exam dumps are one of the highest quality Microsoft 70-762 Q&As in the world. It covers nearly 96% real questions and answers, including the entire testing scope. Lead2pass guarantees you pass Microsoft 70-762 exam at first attempt. Microsoft 70-762 new questions on Google Drive: <https://drive.google.com/open?id=0B3Syig5i8gpDY2hzNXZncVYwRWc> 2017 Microsoft 70-762 exam dumps (All 70 Q&As) from Lead2pass: <http://www.lead2pass.com/70-762.html> [100% Exam Pass Guaranteed]
