Geography D. Localization Answer: A Explanation: Azure allows specification of geographical regions or affinity groups. Geographical regions are related to the data centers, like North Central US, South Central US, Anywhere US, East Asia, North Europe, and so on. The list of options will grow as more data centers are added. Instead of selecting a region, it is possible to specify an affinity group. Affinity groups are hints to Azure that essentially state that everything within the group should be as close in proximity as Azure will allow. That usually means keeping items within the same data center, which besides having the benefit of geo-location, can sometimes offer performance improvements for communication.

A. Security B. Hardware independence C. Scalability D. Variable costs Answer: B Explanation: Virtualization is a conversion process that translates unique IT hardware into emulated and standardized software-based copies. Through hardware independence, virtual servers can easily be moved to another virtualization host, automatically resolving multiple hardware- software incompatibility issues. As a result, cloning and manipulating virtual IT resources is much easier than duplicating physical hardware.

A. Public cloud B. Private community cloud C. Private cloud D. Community cloud Answer: C Explanation: Rapid elasticity is a cloud computing term for scalable provisioning, or the ability to provide scalable services. Software that can scale in a private cloud faces two security related issues: <http://social.technet.microsoft.com/wiki/contents/articles/6810.private-cloud-security-challenges-rapid-elasticity.aspx>

QUESTION 117 70-532 Dumps, 70-532 Exam Questions, 70-532 New Questions, 70-532 VCE, 70-532 PDF Which of the following is the cloud characteristic that speeds up development, deployment and overall time of market? A. Rapid elasticity B. Cloud bursting C. Universal access D. Network pooling Answer: A Explanation: Rapid elasticity is a cloud computing term for scalable provisioning, or the ability to provide scalable services. Experts point to this kind of scalable model as one of five fundamental aspects of cloud computing. Rapid elasticity allows users to automatically request additional space in the cloud or other types of services. <https://www.techopedia.com/definition/29526/rapid-elasticity> QUESTION 118 70-532 Dumps, 70-532 Exam

After researching their options, they decide that a PaaS solution will be sufficient. To reduce upfront cost, the entrepreneur intends to build the site

themselves. Which of the following skill-tests will be needed? A. Firewall Administration B. Web-Server Administration C. Security standard development D. Application development Answer: D Explanation: Platform as a service (PaaS) is a complete development and deployment environment in the cloud, with resources that enable you to deliver everything from simple cloud-based apps to sophisticated, cloud-enabled enterprise applications. PaaS allows you to avoid the expense and complexity of buying and managing software licenses, the underlying application infrastructure and middleware or the development tools and other resources. You manage the applications and services you develop, and the cloud service provider typically manages everything else. <https://azure.microsoft.com/en-us/overview/what-is-paas/> QUESTION 120 70-532 Dumps, 70-532 Exam Questions, 70-532 New Questions, 70-532 VCE, 70-532 PDF When using SaaS, the cloud computing vendor is responsible to maintain which of the following?
